

INTRODUCING THE LATEST ADDITION TO OUR TRAVELING EXHIBITIONS PROGRAM!

Fun and learning come together in this innovative and delightful traveling exhibition, now available!

FORE! The Planet is a highly interactive and playful exhibition that pairs important environmental issues with the fun of miniature golf! Explore a tropical rainforest, navigate a polluted waterway, and learn how to make a wildlife refuge in your own backyard, all while playing a game of miniature golf. Serious fun for the whole family!

FORE! The Planet's message is one of stewardship and conservation. Each of the 18 holes is themed with a different topic, and visitors are invited to learn about such diverse topics as evolution, dinosaur extinction, butterfly metamorphosis, food chains, and a "hole" lot more! The more the visitor learns about the scientific topic the hole is based on, the better they will play.

For example, in Hole 8, *Predator and Prey*, when players identify their golf ball as a housefly (prey), trying to get food from a picnic (where the hole is located), they realize they must avoid the mouth of the frog (predator) and the spider's web (another predator). As they are learning about important facts and relationships in the natural world, they are also learning to avoid these hazards in order to play the game more efficiently. Their reward is to finish the hole with fewer strokes.

Originally developed by the Academy of Natural Sciences, **FORE! The Planet** is once again on the road. **Currently accepting inquiries for immediate booking!**

Outhouse Exhibit Services offers a traveling exhibitions program with a focus on the natural world. Contact us today to learn more about how to bring our exhibitions to your institution.
